<b>Modular IPS Unit</b>	<b>22 - 23</b>
<b>Scrubwash</b>	<b>24 - 25</b>
<b>Case Studies</b>	<b>26 - 45</b>

ONVO are leading the way in raising the hygiene bar around clinical hand washing points in public healthcare buildings.

**Here are the key features that set our basin apart from the traditional IPS and basin set-up:**

- 1 Formed in one piece**  
The Cliniwash clinical hand wash basin is a completely seamless IPS and basin solution. This includes where the basin is joined to the IPS which means there is no silicone joint around the basin to harbour bacteria and also peel away over time.
- 2 No access panels or doors**  
Access panels and doors are not required, removing the difficult to clean bacteria traps that normally surround these areas. This also overcomes panels chipping and misaligning.
- 3 ONVO rail system**  
Allows the entire IPS and clinical hand wash basin to slide effortlessly forward from the wall to provide full access to the pipework behind.
- 4 ONVO pre-plumbed copper swivel system**  
Complies with the demand for copper piping in healthcare environments whilst remaining flexible to enable the unit to slide forward and offer easy access. This pre-plumbed set-up also brings the hot water return to within 270mm of the back of the tap to meet regulations.
- 5 ONVO zinc plated steel support frame**  
Provides robust support and won't deteriorate over time. Also designed in such a way as not to clash with any pipework running down the face of the wall.
- 6 ONVO magnetic locking system**  
Seamless, tamper proof and sleek locking system meaning there are no dirt traps as with a traditional lock.

Please visit:

The ONVO Full Height Cliniwash is a floor to ceiling all in one IPS and Clinical basin solution. This is for situations where the pipework is coming from the ceiling down the face of the wall and requires concealing. All different ceiling heights can be catered for by adjusting the height of the ceiling plinth and the floor plinth is optional depending on the particular waste detail.

Product Codes:

## Half Height Cliniwash

Please visit:

The ONVO Recessed Cliniwash is a fully recessed all in one IPS and Clinical basin solution. This is for situations where there is a wall void of minimum 100mm to accommodate the pipework, waste pipe and steel support frame for the unit. Projecting less than 450mm in total from the finished wall this product is ideal for rooms where space is limited.

### Product Codes:

The ONVO Corner Cliniwash is an all-in-one IPS and Clinical basin solution for situations where the basin and IPS are located in the corner of a room or ward. This offers a full height IPS solution from the side of the basin to the corner of the room giving concealed space to run pipework, waste pipes and other services down the corner of room. The side piece can be handed right or left depending on the situation.

Corner Cliniwash

The ONVO Modular IPS Unit is a solid surface IPS solution for disabled toilet areas and En-suites and has been designed so that the IPS in these areas matches in with the rest of the ONVO product range. This system is very quick and easy to install and available in the same colour range as the ONVO basins. The basin used can either be the ONVO Recessed Cliniwash or any other basin is also compatible. All toilets and grab rails are also compatible with this solution.

Product Codes:

Code	Length	Height	Depth	ONVO Basin
MIPSU/B	1485mm (Basin Wall) x 950mm (Toilet Wall)	2.4m - 3.0m	180mm	With Basin
MIPSU	1485mm (Basin Wall) x 950mm (Toilet Wall)	2.4m - 3.0m	180mm	Without Basin

Either side of the IPS can be extended if required.  
The toilet and basin walls are interchangeable.  
WC and Grab Rails are not included but can be at additional cost.  
Tap not included, please specify separately.

Available Colours:

Orange
